

Cost-Effective Broadcast Solutions for Professional, Educational, Government, and Worship Applications

Introducing NVerzion's PEG-HOW Solution

NVerzion's PEG-HOW solution is designed for professional, educational, government, and house of worship applications, offering a cost-effective automation package. Featuring NControl Lite, it provides the essential tools to get your channel on air, including one workstation and four machine control ports.

Including the Following Modules

NGest simplifies material ingestion between devices, while NFinityView streamlines video server file management, eliminating the need for a dedicated output channel. The NBase module manages media metadata, shared across applications, with NView offering a comprehensive overview of database assets.

The NFinity Broadcast Video Server delivers reliable and flexible solutions for ingest, playout, and control, with tools like NFinityPlay for playlist management and graphics scheduling, and NFinityRecord for manual recordings. Additional features include NFinityTime for automated recording schedules and NFinityCoder for content management.

Finally, Source Switch, NVerzion's proprietary software, allows seamless media insertion and transitions in live or recorded content without external routers. NVerzion's PEG-HOW solution delivers professional-grade tools for diverse broadcasting environments.

Features:

- NControl Lite Automation Package
- NFinityView File Management Software
- NFinity Broadcast Video Server with Integrated Tools
- Source Switch Proprietary Technology Event Monitoring

Benefits:

- Simplifies channel automation with a cost-effective solution that includes all the necessary tools to get your channel on air
- Streamlines video server file management by eliminating the need for a dedicated output channel
- Offers a reliable and flexible solution for ingest, playout, and control, complete with user-friendly tools like NFinityPlay for playlist management and NFinityRecord for manual recordings, enhancing operational versatility
- Enables seamless insertion of media and transitions into live or recorded content without requiring external routers, ensuring smooth, uninterrupted broadcasts while reducing equipment costs
